## **CAR - 66 LICENCESINGOF AIRCRAFT MAINTENANCE ENGINEERS**

Revision 0  
4<sup>th</sup> JUNE 2008

**OFFICE OF THE DIRECTOR GENERAL OF CIVIL AVIATION**  
TECHNICAL CENTRE, OPP SAFDURJUNG AIRPORT, NEW DELHI

CAR 66, DRAFT DATED 04-06-08  
ISSUE 0

# CONTENTS

## CAR 66

### LICENSING OF AIRCRAFT MAINTENANCE ENGINEERS

FOREWORD

RECORD OF REVISIONS

SECTION A

ACCEPTABLE MEANS OF COMPLIANCE  
GUIDANCE MATERIAL  
APPENDIX

**FOREWORD**

Rule 61 of the Aircraft Rules 1937 stipulates the requirements for the grant of licences, approvals, certificate of competence to act in the capacity of Aircraft Maintenance Engineers or approved persons or certificate of competency holders and to sign such certificates in connection with repair, overhaul and maintenance of aircraft, aircraft components and items of equipment in accordance with such procedures as may be prescribed by the Director General required as per the rules.

The draft CAR 66 is to implement proposed Rule 61 and establishes the requirements for the issue/variation of an aircraft maintenance licence and conditions of its validity and use for aircraft.

In order to harmonise Indian requirements for Licencing of Aircraft Maintenance Engineers with international requirements draft CAR 66 is being introduced which is primarily based on EASA Part 66 regulation.

This draft CAR will be issued under the provisions of Rule 133A of the Aircraft Rules 1937.

Note: The existing CAR Sec-2, Series L will be appropriately amended to bring it into conformity with the revised Rule 61 and CAR 66.

# **CAR 66** Sub: Licensing of Aircraft Maintenance Engineers

**66.1** For the purpose of rule 54, the Central Government may grant licences, approvals, Certificate of Competence to persons to act in the capacity of Aircraft Maintenance Engineers or Approved persons or Certificates of Competency holders and to sign such certificates in connection with repair, overhaul and maintenance of aircraft, aircraft components and items of equipment in accordance with such procedures as may be prescribed by the Director General or required under these rules.

## **SECTION A**

### **66.A.1 Scope**

(a) This section establishes the requirements for the issue of an aircraft maintenance licence and conditions of its validity and use, for aeroplanes and helicopters of the following categories

- Category A
- Category B1
- Category B2
- Category C

(b) Categories A and B1 are subdivided into subcategories relative to combinations of aeroplanes, helicopters, turbine and piston engines. The subcategories are:

- A1 and B1.1 Aero planes Turbines
- A2 and B1.2 Aero planes Piston
- A3 and B1.3 Helicopter Turbine
- A4 and B1.4 Helicopter Piston

### **66.A.10 Application**

An application for an aircraft maintenance licence or amendment to such licence shall be made in form and in a manner established by DGCA and submitted thereto. An application for the amendment to an aircraft maintenance licence shall be made to DGCA.

### **66.A.15 Eligibility**

An applicant for an aircraft maintenance licence shall be at least 18 years of age.

## 66.A.20 Privileges

(a) Subject to compliance with paragraph (b), the following privileges shall apply:

1. **Category A** aircraft maintenance licence permits the holder to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the authorization. The certification privileges shall be restricted to carry out the work the licence holder has personally performed in an approved organization.
2. **Category B1** aircraft maintenance licence shall permit the holder to issue certificates of release to service following maintenance, including aircraft structure, powerplant, mechanical and electrical systems. Replacement of avionic line replaceable units, requiring simple tests to prove their serviceability, shall also be included in the privileges. Category B1 shall automatically include the appropriate A subcategory.
3. **Category B2** aircraft maintenance licence shall permit the holder to issue certificates of release to service following maintenance on avionic and electrical systems.
4. **Category C** aircraft maintenance licence shall permit the holder to issue certificates of release to service following base maintenance on aircraft. The privileges apply to the aircraft in its entirety in an approved organization.

(b) The holder of an aircraft maintenance licence may not exercise certification privileges unless:

1. in compliance with the applicable requirements of operator and/or approved organization.
2. in the preceding two year period he/she has either had six months of maintenance experience in accordance with the privileges granted by the aircraft maintenance licence or, met the provision for the issue of appropriate privileges.

## 66.A.25 Basic Knowledge requirements:

- a) The applicant must have passed 10+2 examination in Physics, Chemistry and

Mathematics or equivalent or three years diploma in any branch of engineering or higher examination recognized by the state education board or university.

- b) An applicant for an aircraft maintenance licence or the addition of a category or subcategory to such an aircraft maintenance licence shall demonstrate by examination, a level of knowledge in the appropriate subject modules in accordance with requirements specified in CAR.
- c) Credit against the basic knowledge requirement and associated examinations may be given for any other technical qualification considered by DGCA to be equivalent to the knowledge standard of this Rule. Such credits may be established in accordance as laid down by DGCA.

**66.A.30 Experience requirements:**

- a) An applicant for an aircraft maintenance licence, after having obtained the basic knowledge requirement as specified in para 66.A.25 (a), shall have acquired:

1. for Category A and Sub Categories B1.2 and B1.4:

- (i) four years of practical maintenance experience on operating aircraft, if the applicant has no previous relevant technical training; or
- (ii) one year of practical maintenance on operating aircraft as a skilled worker and completion of an ab-initio aircraft maintenance training approved by DGCA in relevant trade; or
- (iii) one year of practical maintenance experience on operating aircraft and completion of a DGCA approved relevant AME training course approved under CAR 147.

2. for category B2 and subcategories B1.1 and B1.3

- (i) five years of practical maintenance experience on operating aircraft if the applicant has no previous relevant technical training; or
- (ii) two years of practical maintenance experience on operating aircraft as a skilled worker and completion of an ab-initio aircraft maintenance training approved by DGCA in relevant trade or
- (iii) two years of practical maintenance experience on operating aircraft and completion of DGCA approved relevant AME training course approved under CAR 147.

3. for Category C with respect to large aircraft:

Draft CAR 66

- (i) three years of experience exercising category B1.1, B1.3 or B2 privileges on large aircraft or as support staff in base maintenance, or, a combination of both; or
- (ii) five years of experience exercising category B1.2 or B1.4 privileges on large aircraft or as support staff in base maintenance, or a combination of both; or

4. for category C with respect to non large aircraft.

three years of experience exercising category B1 or B.2 privileges on non large aircraft or as DGCA approved maintenance organization B1 or B.2 support staff, or a combination of both; or

5. for category C obtained through the academic route:

An applicant holding an academic degree in a technical discipline, from a university or other higher educational institution recognized by DGCA with three years of experience working in a civil aircraft maintenance environment on a representative selection of tasks directly associated with aircraft maintenance including six months of observation of base maintenance tasks.

- (b) An applicant for an extension to an aircraft maintenance licence shall have a minimum civil aircraft maintenance experience requirement appropriate to the additional category or sub-category of licence applied for as specified by the Director General.
- (c) For category A, B1 and B2 the experience must be practical which means being involved with a representative cross section of maintenance tasks on aircraft.
- (d) For all applicants, at least one year of the required experience must be recent maintenance experience on aircraft of the category/subcategory for which the initial aircraft maintenance licence is sought. For subsequent category /subcategory additions to an existing aircraft maintenance licence, the additional recent maintenance experience required may be less than one year, but must be at least three months.

The required experience must be dependent upon the difference between the licence category/subcategory held and applied for. Such additional experience must be typical of the new licence category/subcategory sought.

- (e) Notwithstanding paragraph (a), aircraft maintenance experience gained outside a civil aircraft maintenance environment may be accepted when such maintenance is equivalent to that required by this Rule as established by DGCA. Additional experience of civil aircraft maintenance shall, however, be required to ensure

understanding of the civil aircraft maintenance environment.

#### **66.A.35 Certification of Microlight aircraft, Gliders, Balloons and Airships**

Certification of micro light aircraft, gliders, paraplanes, balloon and airships may be carried out by category A licence holder in the appropriate rating who will be examined by DGCA after undergoing relevant training and will be granted approval to carry out such maintenance work.

#### **66.A.40 Continued validity of the aircraft maintenance licence**

- (a) The aircraft maintenance licence becomes invalid five years after its last issue or renewal, unless the holder submits his/her aircraft maintenance licence to the DGCA, in order to verify the information contained in the licence is the same as that contained in the DGCA records.
- (b) Any certification privileges based upon a aircraft maintenance licence becomes invalid as soon as the aircraft maintenance licence is invalid.
- (c) The aircraft maintenance licence is only valid when issued by DGCA and when the holder has signed the document

#### **66.A.45 Type / task training and ratings**

- (a) The holder of a category A aircraft maintenance licence may only exercise certification privileges on a specific aircraft type following the satisfactory completion of the relevant category A aircraft task training carried out by an appropriately approved maintenance and / or AME training organization. The training shall include practical hands on training and theoretical training as appropriate for each task authorized. Satisfactory completion of training shall be demonstrated by an examination and/or by workplace assessment carried out by an appropriately approved maintenance or AME training organisation.
- (b) Except as otherwise specified in paragraph (g), the holder of a category B1, B2 or C aircraft maintenance licence shall only exercise certification privileges on a specific aircraft type when the aircraft maintenance licence is endorsed with the appropriate aircraft type rating.
- (c) Except as otherwise specified in paragraph (h), ratings shall be granted following satisfactory completion of the relevant category B1, B2 or C aircraft type training approved by DGCA or conducted by an appropriately approved maintenance training organisation.
- (d) Category B1 and B2 approved type training shall include theoretical and practical elements and consist of the appropriate course in relation to para 66.A.20(a)

Draft CAR 66

privileges. Theoretical and practical training shall comply as laid down by DGCA.

- (e) Category C approved type training shall comply with requirements as laid down by DGCA. In the case of a Category C person qualified by holding an academic degree as specified in Para 66.A.30(a)(5), the first relevant aircraft type theoretical training shall be at the category B1 or B2 level. Practical training is not required.
- (f) Completion of approved aircraft type training, as required by paragraphs (b) to (e), shall be demonstrated by an examination. The examination shall comply as laid down by DGCA. The examinations in respect of category B1 or B2 or C aircraft type ratings shall be conducted by DGCA or the training organization conducting the approved type training course.
- (g) Notwithstanding paragraph (b), for aircraft other than large aircraft, the holder of a category B1 or B2 aircraft maintenance licence may also exercise certification privileges, when the aircraft maintenance licence is endorsed with the appropriate group ratings, or manufacturer group ratings, unless DGCA has determined that the complexity of the aircraft in question requires type rating.
1. Manufacturer group ratings may be granted after complying with the type rating requirements of two aircraft types representative of the group from the same manufacturer.
  2. Full group ratings may be granted after complying with the type rating requirements of three aircraft types representative of the group from different manufacturers. However, no full group rating may be granted to B1 multiple turbine engine aeroplanes, where only manufacturer group rating applies.
  3. The groups shall consist of the following:
    - (i) for category B1 or C
      - helicopter piston engine
      - helicopter turbine engine
      - aeroplane single piston engine – metal structure
      - aeroplane multiple piston engines – metal structure
      - aeroplane single piston engine – wooden structure
      - aeroplane multiple piston engines – wooden structure
      - aeroplane single piston engine – composite structure
      - aeroplane multiple piston engines – composite structure
      - aeroplane turbine – single engine
      - aeroplane turbine – multiple engine
    - (ii) for category B2 or C:
      - aeroplane

- helicopter

- (h) Notwithstanding paragraph (c), ratings on aircraft other than large aircraft may also be granted, subject to satisfactory completion of the relevant category B1, B2 or C aircraft type examination and demonstration of practical experience on the aircraft type, unless DGCA has determined that the aircraft is complex, where paragraph 3 approved type training is required.

In the case of a category C ratings on aircraft other than large aircraft, for a person qualified by holding an academic degree as specified in para 66.A.30 (a) (5), the first relevant aircraft type examination shall be at the category B1 or B2 level.

1. Category B1, B2 and C approved type examinations must consist of a mechanical examination for category B1 and an avionics examination for category B2 and both mechanical and avionics examination for category C.
2. The examination shall comply with requirements as laid down by DGCA. The examination shall be conducted by DGCA.

#### **66.A.70 Conversion provisions**

- (a) The holder of a certifying staff qualification valid by DGCA, prior to the date of entry into force of this Rule may be issued an aircraft maintenance licence without further examination subject to the conditions specified by DGCA.
- (b) A person undergoing a qualification process valid by DGCA, prior to the date of entry into force of this Rule may continue to be qualified. The holder of a qualification gained following such qualification process may be issued an aircraft maintenance licence without further examination subject to the conditions specified by DGCA.
- (c) Where necessary, the aircraft maintenance licence shall contain technical limitations in relation to the scope of the preexisting qualification.

#### **66.A.75 Issue of Approvals:**

The Central Government may grant Approval to the holder of Aircraft Maintenance Licence / other appropriately qualified person employed in an approved maintenance organisation to issue a certificate of maintenance /certificate of release to service in respect of an aircraft, engine, system component, instrument, accessory or item of equipment including radio equipment not required to be covered under licence, after inspection, maintenance, overhaul, repair, modification or test performed in

Draft CAR 66

accordance with the procedures approved by the Director General upon being satisfied that the applicant has sufficient knowledge, experience and has passed such examinations as specified by Director General in the Civil Aviation Requirements.

**66.A.80 Validity:**

Approvals shall remain valid unless suspended, for a period as may be specified by the Director General provided the applicant has been engaged in the performance of the tasks for 3 months in the preceding one year.

**66.A.85 Certificate of Competency:**

The Central Government may grant a Certificate of Competency to an applicant employed in a firm approved by Director-General to perform specialized processes, which may affect the airworthiness of an aircraft, upon being satisfied that the applicant has competency and skill and has passed such examinations prescribed by Director- General.

**66.A.90 Validity:**

Certificates of competency shall remain valid, unless cancelled or suspended, for a period as specified by DGCA provided the applicant has been continuously engaged in the performance of the task for two months within the preceding six months.

**66.A.95 Cancellation, suspension or limitation of the aircraft maintenance licence, approval and certificate of competency:**

Without prejudice to the provisions of sub rule 3 of Rule 19 (b) the Central Government may after such inquiry as it may deem fit and after giving a reasonable opportunity of being heard, cancel, suspend or endorse any licence, authorisation, approval or certificate of competency granted under this rule where it is satisfied that,-

1. (a) the holder has obtained the aircraft maintenance licence or the approval or the certificate of competency and/or the certification privileges by producing false documents.
  
- (b) the holder has failed to carry out required maintenance resulting from own inspection combined with failure to report such fact to the organisation or person for whom the maintenance was intended to be carried out.
  
- (c) the holder has performed work or granted a certificate in respect of work which

has not been performed in a careful and competent manner.

(d) the holder has signed a certificate in respect of any matter which he is not licensed to deal with.

(e) the holder has issued a certificate of release to service knowing that the maintenance specified on the certificate of release to service has not been carried out or without verifying that such maintenance has been carried out.

(f) the holder has falsified the maintenance record.

(g) the holder has carried out maintenance or has issued a certificate of release to service when adversely affected by alcohol or drugs.

(h) the holder has used unfair means when examined.

(i) it is undesirable for any other reason that the holder should continue to exercise his privileges granted under this rule.

2. The Central Government may withhold the grant or renewal of a licence, approval or certificate of competence if for any reason it considers it desirable to do so.

## Acceptable Means of Compliance to CAR -66

### SECTION A

#### AMC 66.A.10 Application

1. Maintenance experience should be written up in a manner that the reader has a reasonable understanding of where, when and what maintenance constitutes the experience. A task by task account is not necessary but at the same time a bland statement "X years maintenance experience completed" is not acceptable. A log book of maintenance experience is desirable and be kept. It is acceptable to cross refer in the CA Form 19 to other documents containing information on maintenance.

2. Applicants claiming the maximum reduction in 66.A.30(a) total experience based upon having successfully completed 147.A.200 approved basic training, should include the CAR -147 certificate of recognition for approved basic training.

3. Applicants claiming reduction in 66.A.30(a) total experience based upon having successfully completed technical training in an organisation or institute recognized by DGCA as a competent organisation or institute, should include the relevant certificate of successful completion of training.

#### AMC 66.A.20(a) Privileges

The following definition of line and base maintenance should apply:

*Line maintenance* is any maintenance that is carried out before flight to ensure that the aircraft is fit for the intended flight. It may include:

- trouble shooting;
- defect rectification;
- component replacement with use of external test equipment if required.

Component replacement may include components such as engines and propellers;

- scheduled maintenance and/or checks including visual inspections that will detect obvious unsatisfactory conditions/discrepancies but do not require extensive in depth inspection. It may also include internal structure, systems and powerplant items which are visible through quick opening access panels/doors;

- minor repairs and modifications which do not require extensive disassembly and can be accomplished by simple means;

- for temporary or occasional cases (airworthiness directives, hereinafter **AD**; **service**

bulletins, hereinafter SB) the quality manager may accept base maintenance tasks to be performed by a line maintenance organisation provided all requirements are fulfilled. DGCA will prescribe the conditions under which these tasks may be performed.

Maintenance tasks falling outside these criteria are considered to be *base maintenance*.

Note: Aircraft maintained in accordance with "progressive" type programmes need to be individually assessed in relation to this paragraph. In principle, the decision to allow some "progressive" checks to be carried out is determined by the assessment that all tasks within the particular check can be carried out safely to the required standards at the designated line maintenance station.

#### **AMC 66.A.20(b)2 Privileges.**

The required 6-month experience should be on aircraft structure, powerplant and systems as appropriate to the category or subcategory and relevant to the type or group rating held. Experience should be supported by documentary evidence.

#### **AMC 66.A.25 Basic knowledge requirements**

1 For an applicant being a person qualified by holding an academic degree in a aeronautical, mechanical or electronic discipline from a recognised university or other higher educational institute the need for any examination will depend upon the course taken in relation to Appendix I to CAR -66

2 Knowledge gained and examinations passed during previous experiences, for example, in military aviation and civilian apprenticeships will be credited where DGCA is satisfied that such knowledge and examinations are equivalent to that required by Appendix I to CAR-66.

#### **AMC 66.A.30(a) Experience requirements**

1. For a category C applicant holding an academic degree the representative selection of tasks should include the observation of hangar maintenance, maintenance planning, quality assurance, record-keeping, approved spare parts control and engineering development.

2. While an applicant to a CAR -66 category C licence may be qualified by having 3 years experience as category B1 or B2 certifying staff only in line maintenance, it is however recommended that any applicant to a category C holding a B1 or B2 licence demonstrate at least 12 months experience as a B1 or B2 base maintenance support staff.

3. A skilled worker is a person who has successfully completed a course of training, acceptable to DGCA, involving the manufacture, repair, overhaul or inspection of mechanical, electrical or electronic equipment. The training

would include the use of tools and measuring devices.

**AMC 66.A.30(d) Experience requirements**

To be considered as recent experience, at least 50% of the required 12 month experience should be gained within the 12 month period prior to the date of application for the CAR-66 aircraft maintenance licence. The remainder of the experience should have been gained within the 7 year period prior to application.

**AMC 66.A.30(e) Experience requirements**

1. For category A the additional experience of civil aircraft maintenance should be a minimum of 6 months. For category B1 or B2 the additional experience of civil aircraft maintenance should be a minimum of 12 months.
2. Aircraft maintenance experience gained outside a civil aircraft maintenance environment can include aircraft maintenance experience gained in armed forces, coast guards, police etc. or in aircraft manufacturing.

**AMC 66.A.45(a) Type/task training and ratings**

- 1 For category A certifying staff specific training on each aircraft type will be required reflecting the authorised task(s) as indicated under -66.A.20 (a) 1.
- 2 Appropriately approved CAR -145 or CAR-147 organisation means compliance with the applicable paragraphs of AMC 66.A.45.

**AMC 66.A.45(d) Type/task training and ratings**

1. The training should give adequate detailed theoretical knowledge of the aircraft, its main parts, systems, equipment, interior and applicable components, including training in the systems in use for technical manuals and maintenance procedures.

The course should also take into account the following:

- (a) in service experience on the aircraft type;
  - (b) feedback from in-service difficulties/occurrence reporting etc;
  - (c) significant airworthiness directives and/or service bulletins;
  - (d) known human factors issues associated with the particular aircraft type.
2. Theoretical training should be supported by training aids such as aircraft system components. Ground simulator time, engine ground running and computer-based training (CBT) etc may also be utilised.

3. Knowledge is also recommended of relevant inspections and limitations as applicable to the effects of environmental factors such as cold and hot climates, wind, moisture, etc.

4. The practical training must comprise a period of 4 months for applicants with no recent recorded previous practical experience of aircraft of comparable construction and systems, including the engines, but this can be reduced to a minimum of two weeks for applicant with such previous experience.

5. A programme of structured on-job-training (OJT) may be prepared to satisfy the practical training requirement. Where the practical training element is conducted by or under the responsibility of the training organisation under an CAR-147 approval or a direct type course approval, it should be considered as CAR of the approved course and as such, **its acceptance by DGCA** should be supported by a detailed syllabus showing its content and duration. The individual practical training records should be designed in a manner that they demonstrate compliance with the detailed practical training syllabus. Such records may take the form of an individual training logbook. The logbook should be designed such that tasks may be countersigned by the CAR-147 school or other course provider.

Where the practical training element is conducted by a maintenance organization approved under CAR-145, under its own responsibility, its acceptance by DGCA should be supported by a detailed syllabus showing its content and duration. The individual practical training records should be designed in a manner that they demonstrate compliance with the detailed practical training syllabus. Alternatively, the practical training element may consist of a structured OJT programme. In this case the maintenance organisation approved under CAR 145 should provide applicants for a type rating a logbook indicating a list of tasks to be performed under supervision. The logbook should be designed such that tasks may be countersigned by the supervisor. The list of tasks should be accepted directly for each individual – depending on the individuals previous experience, or indirectly through the acceptance of a procedure giving delegation to the maintenance organisation.

In all cases the practical element should include an acceptable cross section of maintenance tasks, which, in the case of a structured OJT, can be tailored to accommodate the operating profile of the CAR -145 organisation whilst also supplementing the theoretical course elements. The means by which the practical element is supervised and the control of the standard should be acceptable to DGCA. The duration of the practical type training element should take into account significant differences between types and be acceptable to DGCA.

These differences will require considerably more practical training for certifying staff who are not familiar with the new techniques and technologies. Some examples of differences may include, but are not limited to, the following elements: Fly by wire, glass cockpit avionics, significant structural differences, etc.

5. Before grant of the aircraft type, the applicant should be able to:

(a) demonstrate by knowledge examination a detailed understanding of applicable systems, their operation and maintenance;

(b) ensure safe performance of maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks, as appropriate, for the type of aircraft, for example trouble shooting, repairs, adjustments, replacements, rigging and functional checks such as engine run, etc, if required;

(c) correctly use all technical literature and documentation for the aircraft;

(d) correctly use specialist/special tooling and test equipment, perform removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

6. The practical assessment should also ensure safe performance of maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example trouble shooting, repairs, adjustments (rigging), replacements and functional /operational checks etc including engine operation (ground running) if required.

#### **AMC 66.A.45(e) Type/task training and ratings**

Category C certifying staff may not carry out the duties of category B1 or B2, or equivalent within base maintenance, unless they hold the relevant B1 or B2 category and have passed type training corresponding to the relevant B1 or B2 category.

#### **AMC 66.A.45(g) Type/task training and ratings**

1. "Aircraft types representative of a group" means that:

- for the B1 category the aircraft type should include typical systems and engines relevant to the group (e.g. retractable undercarriage, pressurisation, variable pitch propeller, etc. for the single piston engine metal subgroup) and,

- for the B2 category the aircraft type should include complex avionics systems such as radio coupled autopilot, EFIS (Electronic flight instrument system), flight guidance systems, etc .

2. A "multiple engines" group automatically includes the corresponding "single engine" group.

#### **AMC 66.A.45(h) Type/task training and ratings**

1. Type experience should cover an acceptable cross section of tasks from

Appendix II. For the first aircraft type of each manufacturer group , at least 50% of the Appendix II tasks, as applicable to the concerned aircraft type and licence category, should be performed. For the second aircraft type of each manufacturer group, this should be reduced to 30%. For subsequent aircraft types of each manufacturer group, this should be reduced to 20%.

2. Type experience should be demonstrated by the submission of records or logbook showing the Appendix II tasks performed by the applicant as specified by DGCA.

### **AMC 66.A.70 Conversion provisions**

Technical limitations will be deleted, as appropriate, when the person satisfactorily sits the relevant conversion examination and gains relevant experience.

## Guidance Material to CAR - 66

### SECTION A

#### GM 66.A.20(a) Privileges

1. The following titles shown against each category designator below are intended to provide a readily understandable indication of the job function:

Category A: Line maintenance certifying mechanic.

Category B1: Maintenance certifying technician - mechanical.

Category B2: Maintenance certifying technician - avionic.

Category C: Base maintenance certifying engineer.

2. Individual aircraft maintenance licence holders need not be restricted to a single category. Provided that each qualification requirement is satisfied, any combination of categories may be granted.

#### GM 66.A.20(a) Privileges

1. Tasks permitted by 66.A.20 (a) 1. to be certified under the category A certification authorisation as part of minor scheduled maintenance or simple defect rectification are as specified in CAR 145 and agreed by DGCA. CAR 145 contains a typical example list of such tasks.

2. For the purposes of category A minor scheduled line maintenance means any minor check up to but not including the A check where functional tests can be carried out by the aircrew to ensure system serviceability. In the case of an aircraft type not controlled by a maintenance programme based upon the A/B/C/D check principle, minor scheduled line maintenance means any minor check up to and including the weekly check or equivalent.

3. The category B1 licence also permits the certification of work involving avionic systems, providing the serviceability of the system can be established by a simple self-test facility, other on-board test systems/equipment or by simple ramp test equipment. Defect rectification involving test equipment which requires an element of decision making in its application - other than a simple go/no-go decision - cannot be certified. The category B2 will need to be qualified as Category A in order to carry out simple mechanical tasks and be able to make certifications for such work.

4. The category C certification authorisation permits certification of scheduled base maintenance by the issue of a single certificate of release to service for the complete aircraft after the completion of all such maintenance. The basis for this certification is that the maintenance has been carried out by competent mechanics and both category B1 and

B2 staff have signed for the maintenance under their respective specialisation. The principal function of the category C certifying staff is to ensure that all required maintenance has been called up and signed off by the category B1 and B2 staff before issue of the certificate of release to service. Category C personnel who also hold category B1 or B2 qualifications may perform both roles in base maintenance.

### **GM 66.A.20(b)3. Privileges**

1. Holders of a CAR -66 aircraft maintenance licence may not exercise certification privileges unless they have a general knowledge of the language used within the maintenance environment including knowledge of common aeronautical terms in the language. The level of knowledge should be such that the licence holder is able to:

- read and understand the instructions and technical manuals in use within the organisation;
- make written technical entries and any maintenance documentation entries, which can be understood by those with whom they are normally required to communicate;
- read and understand the maintenance organisation procedures;
- communicate at such a level as to prevent any misunderstanding when exercising certification privileges.

2. In all cases, the level of understanding should be compatible with the level of certification privileges exercised.

### **GM 66.A.25(a) Basic knowledge requirements**

The levels of knowledge are directly related to the complexity of certifications appropriate to the particular 66.A.1 category, which means that category A must demonstrate a limited but adequate level of knowledge, whereas category B1 and B2 must demonstrate a complete level of knowledge in the appropriate subject modules.

Category C certifying staff must meet the relevant level of knowledge for B1 or B2.

### **GM 66.A.30(a) Basic knowledge requirements**

Maintenance experience on operating aircraft means the experience of being involved in maintenance tasks on aircraft which are being operated by airlines, air taxi organisations, etc. The point being to gain sufficient experience in the environment of commercial maintenance as opposed to only the training school environment. Such experience may be combined with approved training so that periods of training can be intermixed with periods of experience rather like the apprenticeship.

### **GM 66.A.40 Continued validity of the aircraft maintenance licence**

Validity of the CAR -66 aircraft maintenance licence is not affected by recency of maintenance experience whereas the validity of the 66.A.20 privileges is affected by

### **GM 66.A.45(d) Type/task training and ratings**

1. The required duration of practical training must be accepted on a case by case basis by DGCA prior to the type rating endorsement. It is strongly recommended that the agreement on the practical training duration be reached before the training starts. For applicants from a CAR -145 organisation, the required duration may be approved through the organisation's MOE procedures.

2. While it is not feasible to establish a formula giving the required training duration in all cases, the following may be used as a guideline:

(a) For a first type training course with no recent recorded maintenance experience four months practical training is required.

(b) Some factors that may lead to a reduction in the maximum duration of 4 months practical training required are as follows:

-experience on aircraft type of a similar technology, construction and systems including engines;

-recency on type;

-the quantity of the practical experience. For example experience gained will depend upon the environment e.g. line maintenance environment with one aircraft per week would permit limited experience compared with the constant base maintenance check environment;

-the quality of the practical experience. The type of tasks carried out. These tasks should reflect, at a minimum, those tasks specified by the practical training needs matrix developed by the organisation approved under CAR -147.

3. The minimum two weeks practical training is normally required for all type training courses. This includes the addition of similar type ratings on a CAR -66 licence (differences courses). There may be cases where the practical differences training required is less than two weeks for example an engineer with a CAR -66 type license in category B2 on an Airbus A330 with PW 4000 engines who takes a differences course to an Airbus A330 with Rolls Royce Trent engines.

It should be noted however that while AMC 66.A.45(d) specifies a practical training duration between 2 weeks and 4 months, in the case of a structured OJT performed at line stations, due to the availability of aircraft its duration may need be subsequently extended in order to fulfill the required list of supervised tasks.

4. Except in those cases where the CAR -147 organisation determines the practical training

required it is the responsibility of the maintenance organisation to determine that the duration of practical training is commensurate with the candidates' recency and experience. However, in either case, DGCA must satisfy itself that the practical training is of sufficient duration before adding a type rating.

Limited avionics system training should be included in the category B1 type training as the B1 privileges include the replacement of avionic line replaceable units. Electrical systems should be included in both categories type training.

#### **GM 66.A.45(f) Type/task training and ratings**

The examinations in respect of category B1 or B2 or C aircraft type ratings may be conducted by training organisations appropriately approved under CAR -147, or an organisation accepted by DGCA to conduct such examination.

#### **GM 66.A.45(d) and (e) Type/task training and ratings**

CAR -66 Appendix III type training levels are based upon [ATA 104](#) (Air Transport Association) corresponding type training levels.

#### **Guidance to 66.A.70 Conversion provisions**

For example a technical limitation could be where a person holds a pre CAR -66 national licence or authorization limited to the release of the airframe and engine but not the electrical power system. This person would be issued with a CAR -66 aircraft maintenance licence in the B1 category with a limitation excluding electrical power systems.

## **APPENDIX**

### **Aircraft Type Practical Experience**

#### **List of Tasks**

#### **Appendix Aircraft type practical experience list of tasks Time limits/Maintenance checks**

100 hour check (general aviation aircraft).  
“B” or “C” check (transport category aircraft).  
Review records for compliance with airworthiness directives.  
Review records for compliance with component life limits.  
Procedure for Inspection following heavy landing.  
Procedure for Inspection following lightning strike.

#### **Dimensions/Areas**

Locate component(s) by station number.  
Perform symmetry check.

#### **Lifting and Shoring**

Assist in :  
Jack aircraft nose or tail wheel.  
Jack complete aircraft.  
Sling or trestle major component.

#### **Levelling/Weighing**

Level aircraft.  
Weigh aircraft.  
Prepare weight and balance amendment.  
Check aircraft against equipment list.

#### **Towing and Taxiing**

Tow aircraft.  
Be CARof aircraft towing team.

#### **Parking and mooring**

Tie down aircraft.  
Park, secure and cover aircraft.  
Position aircraft in dock.  
Secure rotor blades.

### **Placards and Markings**

Check aircraft for correct placards.  
Check aircraft for correct markings.

### **Servicing**

Refuel aircraft.  
Defuel aircraft.  
Check tire pressures.  
Check oil level.  
Check hydraulic fluid level.  
Check accumulator pressure.  
Charge pneumatic system.  
Grease aircraft.  
Connect ground power.  
Service toilet/water system  
Perform pre-flight/daily check

### **Vibration and Noise Analysis**

Analyse helicopter vibration problem.  
Analyse noise spectrum.

### **Air Conditioning**

Replace combustion heater.  
Replace outflow valve.  
Replace vapour cycle unit.  
Replace air cycle unit.  
Replace cabin blower.  
Replace heat exchanger.  
Replace pressurisation controller.  
Clean outflow valves.  
Check operation of air conditioning/heating system  
Check operation of pressurisation system  
Troubleshoot faulty system

### **Auto flight**

Install servos.  
Rig bridle cables  
Replace controller.  
Replace amplifier.  
Check operation of auto-pilot.  
Check operation of auto-throttle.  
Check operation of yaw damper.  
Check and adjust servo clutch.

Draft CAR 66

Perform autopilot gain adjustments.  
Perform mach trim functional check.  
Troubleshoot faulty system.  
Check autoland system  
Check flight management systems  
Check stability augmentation system

### **Communications**

Replace VHF com unit.  
Replace HF com unit.  
Replace existing antenna.  
Replace static discharge wicks.  
Check operation of radios.  
Perform antenna VSWR check.  
Perform Selcal operational check.  
Perform operational check of  
passenger address system.  
Functionally check audio integrating  
system.  
Repair co-axial cable.  
Troubleshoot faulty system.

### **Electrical Power**

Charge lead/acid battery.  
Charge ni-cad battery.  
Check battery capacity.  
Deep-cycle ni-cad battery.  
Replace generator/alternator.  
Replace switches.  
Replace circuit breakers.  
Adjust voltage regulator.  
Amend electrical load analysis report.  
Repair/replace electrical feeder cable.  
Troubleshoot faulty system

### **Equipment/Furnishings**

Replace carpets  
Replace crew seats.  
Replace passenger seats.  
Check inertia reels.  
Check seats/belts for security.  
Check emergency equipment.  
Check ELT for compliance with regulations.  
Repair toilet waste container.

Repair upholstery.  
Change cabin configuration.

### **Fire protection**

Check fire bottle contents.  
Check operation of warning system.  
Check cabin fire extinguisher contents.  
Check lavatory smoke detector system.  
Install new fire bottle.  
Replace fire bottle squib.  
Troubleshoot faulty system.  
Inspect engine fire wire detection systems

### **Flight Controls**

Replace horizontal stabiliser.  
Replace elevator.  
Replace aileron.  
Replace rudder.  
Replace trim tabs.  
Install control cable and fittings.  
Replace flaps.  
Replace powered flying control unit  
Replace flat actuator  
Adjust trim tab.  
Adjust control cable tension.  
Check control range and sense of movement.  
Check for correct assembly and locking.  
Troubleshoot faulty system.

### **Fuel**

Replace booster pump.  
Replace fuel selector.  
Replace fuel tank cells.  
Check filters.  
Flow check system.  
Check calibration of fuel quantity gauges.  
Check operation feed/selectors  
Troubleshoot faulty system.

Draft CAR 66

## **Hydraulics**

Replace engine driven pump.  
Replace standby pump.  
Replace accumulator.  
Check operation of shut off valve.  
Check filters.  
Check indicating systems.  
Perform functional checks.  
Troubleshoot faulty system.

## **Ice and rain protection**

Replace pump.  
Replace timer.  
Install wiper motor.  
Check operation of systems.  
Troubleshoot faulty system.

## **Indicating/recording systems**

Replace flight data recorder.  
Replace cockpit voice recorder.  
Replace clock.  
Replace master caution unit.  
Replace FDR.  
Perform FDR data retrieval.  
Troubleshoot faulty system.  
Implement ESDS procedures  
Inspect for HIRF requirements

## **Landing Gear**

Build up wheel.  
Replace main wheel.  
Replace nose wheel.  
Replace shimmy damper.  
Rig nose wheel steering.  
Replace shock strut seals.  
Replace brake unit.  
Replace brake control valve.  
Bleed brakes.  
Test anti skid unit.  
Test gear retraction.  
Change bungees.

Adjust micro switches.  
Charge struts.  
Troubleshoot faulty system.  
Test outbrake system

## **Lights**

Repair/replace rotating beacon.  
Repair/replace landing lights.  
Repair/replace navigation lights.  
Repair/replace interior lights.  
Repair/replace emergency lighting system.  
Perform emergency lighting system checks.  
Troubleshoot faulty system

## **Navigation**

Calibrate magnetic direction indicator.  
Replace airspeed indicator.  
Replace altimeter.  
Replace air data computer.  
Replace VOR unit.  
Replace ADI.  
Replace HSI.  
Check pitot static system for leaks.  
Check operation of directional gyro.  
Functional check weather radar.  
Functional check doppler.  
Functional check TCAS.  
Functional check DME  
Functional check ATC Transponder  
Functional check flight director system.  
Functional check inertial nav system.  
Complete quadrantal error correction of ADF system.  
Update flight management system database.  
Check calibration of pitot static instruments.  
Check calibration of pressure altitude reporting system.  
Troubleshoot faulty system  
Check marker systems  
Compass replacement direct/indirect  
Check Satcom  
Check GPS  
Test AVM

Draft CAR 66

## **Oxygen**

Inspect on board oxygen equipment.  
Purge and recharge oxygen system.  
Replace regulator.  
Replace oxygen generator.  
Test crew oxygen system.  
Perform auto oxygen system deployment check.  
Troubleshoot faulty system.

## **Pneumatic systems**

Replace filter.  
Replace compressor.  
Recharge dessicator.  
Adjust regulator.  
Check for leaks.  
Troubleshoot faulty system.

## **Vacuum systems**

Replace vacuum pump.  
Check/replace filters.  
Adjust regulator.  
Troubleshoot faulty system.

## **Water/Waste**

Replace water pump.  
Replace tap.  
Replace toilet pump.  
Troubleshoot faulty system.

## **Central Maintenance System**

Retrieve data from CMU.  
Replace CMU.  
Perform Bite check.  
Troubleshoot faulty system.

## **Airborne Auxiliary power**

Install APU.  
Inspect hot section.

Troubleshoot faulty system.

## **Structures**

Sheet metal repair.  
Fibre glass repair.  
Wooden repair.  
Fabric repair.  
Recover fabric control surface.  
Treat corrosion.  
Apply protective treatment.

**Doors**Rig/adjust locking mechanism.  
Adjust air stair system.  
Check operation of emergency exits.  
Test door warning system.  
Troubleshoot faulty system.

## **Windows**

Replace windshield.  
Replace window.  
Repair transparency.

## **Wings**

Skin repair.  
Recover fabric wing.  
Replace tip.  
Replace rib.  
Check incidence/rig.

## **Propeller**

Assemble prop after transportation.  
Replace propeller.  
Replace governor.  
Adjust governor.  
Perform static functional checks.  
Check operation during ground run.  
Check track.  
Check setting of micro switches.  
Dress out blade damage.  
Dynamically balance prop.  
Troubleshoot faulty system.

## **Main Rotors**

Draft CAR 66

Install rotor assembly.  
Replace blades.  
Replace damper assembly.  
Check track.  
Check static balance.  
Check dynamic balance.  
Troubleshoot.

### **Rotor Drive**

Replace mast.  
Replace drive coupling.  
Replace clutch/freewheel unit  
Replace drive belt.  
Install main gearbox.  
Overhaul main gearbox.  
Check gearbox chip detectors.

### **Tail Rotors**

Install rotor assembly.  
Replace blades.  
Troubleshoot.

### **Tail Rotor Drive**

Replace bevel gearbox.  
Replace universal joints.  
Overhaul bevel gearbox.  
Install drive assembly.  
Check chip detectors.

### **Rotorcraft flight controls**

Install swash plate.  
Install mixing box.  
Adjust pitch links.  
Rig collective system.  
Rig cyclic system.  
Rig anti-torque system.  
Check controls for assembly and locking.  
Check controls for operation and sense.  
Troubleshoot faulty system.

### **Power Plant**

Build up ECU.  
Replace engine.  
Repair cooling baffles.  
Repair cowling.  
Adjust cowl flaps.  
Repair faulty wiring.  
Troubleshoot.

### **Piston Engines**

Remove/install reduction gear.  
Check crankshaft run-out.  
Check tappet clearance.  
Check compression.  
Extract broken stud.  
Install helicoil.  
Perform ground run.  
Establish/check reference RPM.  
Troubleshoot.

### **Turbine Engines**

Replace module.  
Hot section inspection.  
Engine ground run.  
Establish reference power.  
Trend monitoring/gas path analysis.  
Troubleshoot.

### **Fuel and control, piston**

Replace engine driven pump.  
Adjust AMC.  
Adjust ABC.  
Install carburettor/injector.  
Adjust carburettor/injector.  
Clean injector nozzles.  
Replace primer line.  
Check carburettor float setting.  
Troubleshoot faulty system.

### **Fuel and control, turbine**

Replace FCU.  
Replace engine driven pump.  
Clean/test fuel nozzles.  
Clean/replace filters.  
Adjust FCU.

Draft CAR 66  
Troubleshoot faulty system.

### **Ignition systems, piston**

Change magneto.  
Change ignition vibrator.  
Change plugs.  
Test plugs.  
Check H.T. leads.  
Install new leads.  
Check timing.  
Check system bonding.  
Troubleshoot faulty system.

### **Ignition systems, turbine**

Check glow plugs/ignitors.  
Check H.T. leads.  
Check ignition unit.  
Replace ignition unit.  
Troubleshoot faulty system.

### **Engine Controls**

Rig thrust lever.  
Rig RPM control.  
Rig mixture HP cock lever.  
Rig power lever.  
Check control sync (multi-eng).  
Check controls for correct assembly and locking.  
Check controls for range and sense of operation.  
Adjust pedestal micro-switches.  
Troubleshoot faulty system.

### **Engine Indicating**

Replace engine instruments(s).  
Replace oil temperature bulb.  
Replace thermocouples.  
Check calibration.  
Troubleshoot faulty system.

### **Exhaust, piston**

Replace exhaust gasket.  
Inspect welded repair.  
Pressure check cabin heater muff.  
Troubleshoot faulty system.

### **Exhaust, turbine**

Change jet pipe.

Change shroud assembly.  
Install trimmers.

### **Oil**

Change oil.  
Check filter(s).  
Adjust pressure relief valve.  
Replace oil tank.  
Replace oil pump.  
Replace oil cooler.  
Replace firewall shut off valve.  
Perform oil dilution.  
Troubleshoot faulty system.

### **Starting**

Replace starter.  
Replace start relay.  
Replace start control valve.  
Check cranking speed.  
Troubleshoot faulty system.

### **Turbines, piston engines**

Replace PRT.  
Replace turbo-blower.  
Replace heat shields.  
Replace waste gate.  
Adjust density controller.

### **Engine water injection**

Replace water/methanol pump.  
Flow check water/methanol system.  
Adjust water/methanol control unit.  
Check fluid for quality.  
Troubleshoot faulty system

### **Accessory gear boxes**

Replace gearbox.  
Replace drive shaft.  
Check chip detector.

APPENDIX I

**Basic knowledge requirements**

1. KNOWLEDGE LEVELS — CATEGORY A, B1, B2 AND C AIRCRAFT MAINTENANCE LICENCE

Basic knowledge for categories A, B1 and B2 are indicated by the allocation of knowledge levels indicators (1, 2 or 3) against each applicable subject. Category C applicants must meet either the category B1 or the category B2 basic knowledge levels.

The knowledge level indicators are defined as follows:

LEVEL 1

Familiarisation with the principal elements of the subject.

Objectives: The applicant should be familiar with the basic elements of the subject.

The applicant should be able to give a simple description of the whole subject, using common words and examples.

The applicant should be able to use typical terms.

LEVEL 2

A general knowledge of the theoretical and practical aspects of the subject.

*An ability to apply that knowledge.*

Objectives: The applicant should be able to understand the theoretical fundamentals of the subject.

The applicant should be able to give a general description of the subject using, as appropriate, typical examples.

The applicant should be able to use mathematical formulae in conjunction with physical laws describing the subject.

The applicant should be able to read and understand sketches, drawings and schematics describing the subject.

The applicant should be able to apply his knowledge in a practical manner using detailed procedures.

LEVEL 3

A detailed knowledge of the theoretical and practical aspects of the subject.

*A capacity to combine and apply the separate elements of knowledge in a logical and comprehensive manner.*

Objectives: The applicant should know the theory of the subject and interrelationships with other subjects.

The applicant should be able to give a detailed description of the subject using theoretical fundamentals and specific examples.

The applicant should understand and be able to use mathematical formulae related to the subject.

The applicant should be able to read, understand and prepare sketches, simple drawings and schematics describing the subject.

The applicant should be able to apply his knowledge in a practical manner using manufacturer's instructions.

The applicant should be able to interpret results from various sources and measurements and apply corrective action where appropriate.

2. MODULARISATION

Qualification on basic subjects for each Rule 61 aircraft maintenance licence category or subcategory should be in accordance with the following matrix. Applicable subjects are indicated by an 'X':

Subject Modules	A or B1 aeroplane with:		A or B1 helicopter with:		B2
	Turbine engine (s)	Piston engine (s)	Turbine engine (s)	Piston engine (s)	Avionics
1	<del>X</del>	<del>X</del>	<del>X</del>	<del>X</del>	<del>X</del>
2	<del>X</del>	<del>X</del>	<del>X</del>	<del>X</del>	<del>X</del>
3	X	X	X	X	X
4	X	X	X	X	X
5	X	X	X	X	X
6	X	X	X	X	X
7	X	X	X	X	X
8	X	X	X	X	X
9	X	X	X	X	X
10	X	X	X	X	X

15	X		X		
16		X		X	
17	X	X			

Draft CAR 66  
MODULE 1. MATHEMATICS

	Level		
	A	B1	B2
<p><b>1.1 Arithmetic</b></p> <p>Arithmetical terms and signs, methods of multiplication and division, fractions and decimals, factors and multiples, weights, measures and conversion factors, ratio and proportion, averages and percentages, areas and volumes, squares, cubes, square and cube roots.</p>	1	2	2
<p><b>1.2 Algebra</b></p> <p>(a)</p> <p>Evaluating simple algebraic expressions, addition, subtraction, multiplication and division, use of brackets, simple algebraic fractions;</p>	1	2	2
<p>(b)</p> <p>Linear equations and their solutions; Indices and powers, negative and fractional indices; Binary and other applicable numbering systems; Simultaneous equations and second degree equations with one unknown;</p>		1	1
<p><b>1.3 Geometry</b></p> <p>(a)</p> <p>Simple geometrical</p>		1	1
<p>(b)</p> <p>Graphical representation; nature and uses of graphs, graphs of equations/functions;</p>	2	2	2
<p>(c)</p> <p>Simple trigonometry; trigonometrical relationships, use of tables and rectangular and polar coordinates</p>		2	2

MODULE 2. PHYSICS

	Level		
	A	B1	B2
<p><b>2.1 Matter</b></p> <p>Nature of matter: the chemical elements, structure of atoms, molecules; Chemical compounds. States: solid, liquid and gaseous; Changes between states.</p>	1	1	1
<p><b>2.2 Mechanics</b></p> <p><b>2.2.1 Statics</b></p> <p>Forces, moments and couples, representation as vectors; Centre of gravity. Elements of theory of stress, strain and elasticity: tension, compression, shear and torsion;</p>	1	2	1

	Level		
	A	B1	B2
Nature and properties of solid, fluid and gas; Pressure and buoyancy in liquids (barometers)			
<b>2.2.2 Kinetics</b>	— 1	— 2	— 1
Linear movement: uniform motion in a straight line, motion under constant acceleration (motion under gravity); Rotational movement: uniform circular motion (centrifugal/centripetal forces); Periodic motion: pendular movement; Simple theory of vibration, harmonics and resonance; Velocity ratio, mechanical advantage and efficiency			
<b>2.2.3 Dynamics</b>			
(a) Mass Force, inertia, work, power, energy (potential, kinetic and total energy), heat, efficiency;	— 1	— 2	— 1
(b) Momentum, conservation of momentum; Impulse; Gyroscopic principles; Friction: nature and effects, coefficient of friction (rolling resistance).	— 1	— 2	— 2
<b>2.2.4 Fluid dynamics</b>			
(a) Specific gravity and density;	— 2	— 2	— 2
(b) Viscosity, fluid resistance, effects of streamlining; effects of compressibility on fluids; Static, dynamic and total pressure: Bernoulli's Theorem, venturi.	— 1	— 2	— 1
<b>2.3 Thermodynamics</b>			
(a) Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition.	— 2	— 2	— 2
(b) Heat capacity, specific heat; Heat transfer: convection, radiation and conduction; Volumetric expansion; First and second law of thermodynamics;	—	— 2	— 2

Draft CAR 66

	Level		
	A	B1	B2
<p>Gases: ideal gases laws; specific heat at constant volume and constant pressure, work done by expanding gas;</p> <p>Isothermal, adiabatic expansion and compression, engine cycles, constant volume and constant pressure, refrigerators and heat pumps;</p> <p>Latent heats of fusion and evaporation, thermal energy, heat of combustion.</p>			
<p><b>2.4 Optics (Light)</b></p> <p>Nature of light; speed of light;</p> <p>Laws of reflection and refraction: reflection at plane surfaces, reflection by spherical mirrors, refraction, lenses;</p> <p>Fibre optics.</p>	—	— <sub>2</sub>	— <sub>2</sub>
<p><b>2.5 Wave Motion and Sound</b></p> <p>Wave motion: mechanical waves, sinusoidal wave motion, interference phenomena, standing waves;</p> <p>Sound: speed of sound, production of sound, intensity, pitch and quality, Doppler effect.</p>	—	— <sub>2</sub>	— <sub>2</sub>

MODULE 3. ELECTRICAL FUNDAMENTALS

	Level		
	A	B1	B2
<p><b>3.1 Electron Theory</b></p> <p>Structure and distribution of electrical charges within: atoms, molecules, ions, compounds;</p> <p>Molecular structure of conductors, semiconductors and insulators</p>	1	1	1
<p><b>3.2 Static Electricity and Conduction</b></p> <p>Static electricity and distribution of electrostatic charges;</p> <p>Electrostatic laws of attraction and repulsion;</p> <p>Units of charge, Coulomb's Law;</p> <p>Conduction of electricity in solids, liquids, gases and a vacuum.</p>	1	2	2
<p><b>3.3 Electrical Terminology</b></p> <p>The following terms, their units and factors affecting them: potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.</p>	1	2	2

	Level		
	A	B1	B2
<p><b>3.4 Generation of Electricity</b> Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.</p>	1	1	1
<p><b>3.5 DC Sources of Electricity</b> Construction and basic chemical action of: primary cells, secondary cells, lead acid cells, nickel cadmium cells, other alkaline cells; Cells connected in series and parallel; Internal resistance and its effect on a battery; Construction, materials and operation of thermocouples; Operation of photo-cells.</p>	1	2	2
<p><b>3.6 DC Circuits</b> Ohms Law, Kirchoff's Voltage and Current Laws; Calculations using the above laws to find resistance, voltage and current; Significance of the internal resistance of a supply.</p>	-	2	2
<p><b>3.7 Resistance / Resistor</b> (a) Resistance and affecting factors; Specific resistance; Resistor colour code, values and tolerances, preferred values, wattage ratings; Resistors in series and parallel; Calculation of total resistance using series, parallel and series parallel combinations; Operation and use of potentiometers and rheostats; Operation of Wheatstone Bridge.</p>	-	2	2
<p>(b) Positive and negative temperature coefficient conductance; Fixed resistors, stability, tolerance and limitations, methods of construction; Variable resistors, thermistors, voltage dependent resistors; Construction of potentiometers and rheostats; Construction of Wheatstone Bridge;</p>	-	1	1

Draft CAR 66

	Level		
	A	B1	B2
<p><b>3.8 Power</b></p> <p>Power, work and energy (kinetic and potential);</p> <p>Dissipation of power by a resistor;</p> <p>Power formula;</p> <p>Calculations involving power, work and energy.</p>	-	2	2
<p><b>3.9 Capacitance / Capacitor</b></p> <p>Operation and function of a capacitor;</p> <p>Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating;</p> <p>Capacitor types, construction and function;</p> <p>Capacitor colour coding;</p> <p>Calculations of capacitance and voltage in series and parallel circuits;</p> <p>Exponential charge and discharge of a capacitor, time constants;</p> <p>Testing of capacitors.</p>	-	2	2
<p><b>3.10 Magnetism</b></p> <p>(a)</p> <p>Theory of magnetism;</p> <p>Properties of a magnet;</p> <p>Action of a magnet suspended in the Earth's magnetic field;</p> <p>Magnetisation and demagnetisation;</p> <p>Magnetic shielding;</p> <p>Various types of magnetic material;</p> <p>Electromagnets construction and principles of operation;</p> <p>Hand clasp rules to determine: magnetic field around current carrying conductor.</p>	-	2	2
<p>(b)</p> <p>Magnetomotive force, field strength, magnetic flux density, permeability, hysteresis loop, retentivity, coercive force reluctance, saturation point, eddy currents;</p> <p>Precautions for care and storage of magnets.</p>	-	2	2

	Level		
	A	B1	B2
<p><b>3.11 Inductance / Inductor</b></p> <p>Faraday's Law;</p> <p>Action of inducing a voltage in a conductor moving in a magnetic field;</p> <p>Induction principles;</p> <p>Effects of the following on the magnitude of an induced voltage: magnetic field strength, rate of change of flux, number of conductor turns;</p> <p>Mutual induction;</p> <p>The effect the rate of change of primary current and mutual inductance has on induced voltage;</p> <p>Factors affecting mutual inductance: number of turns in coil, physical size of coil, permeability of coil, position of coils with respect to each other;</p> <p>Lenz's Law and polarity determining rules;</p> <p>Back emf, self induction;</p> <p>Saturation point;</p> <p>Principle uses of inductors;</p>	-	2	2
<p><b>3.12 DC Motor / Generator Theory</b></p> <p>Basic motor and generator theory;</p> <p>Construction and purpose of components in DC generator;</p> <p>Operation of, and factors affecting output and direction of current flow in DC generators</p> <p>Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors;</p> <p>Series wound, shunt wound and compound motors;</p> <p>Starter Generator construction.</p>	-	2	2
<p><b>3.13 AC Theory</b></p> <p>Sinusoidal waveform: phase, period, frequency, cycle;</p> <p>Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power</p> <p>Triangular/Square waves;</p> <p>Single/3 phase principles.</p>	1	2	2

Draft CAR 66

	Level		
	A	B1	B2
<p><b>3.14 Resistive (R), Capacitance (C) and Inductive (L) Circuits</b></p> <p>Phase relationship of voltage and current in L, C and R circuits, parallel, series and series parallel;</p> <p>Power dissipation in L, C and R circuits;</p> <p>Impedance, phase angle, power factor and current calculations;</p> <p>True power, apparent power and reactive power calculations.</p>	-	2	2
<p><b>3.15 Transformers</b></p> <p>Transformer construction principles and operation;</p> <p>Transformer losses and methods for overcoming them;</p> <p>Transformer action under load and no-load conditions;</p> <p>Power transfer, efficiency, polarity markings;</p> <p>Calculation of line and phase voltages and currents;</p> <p>Calculation of power in a three phase system;</p> <p>Primary and Secondary current, voltage, turns ratio, power, efficiency;</p> <p>Auto transformers.</p>	-	2	2
<p><b>3.16 Filters</b></p> <p>Operation, application and uses of the following filters: low pass, high pass, band pass, band stop.</p>	-	1	1
<p><b>3.17 AC Generators</b></p> <p>Rotation of loop in a magnetic field and waveform produced;</p> <p>Operation and construction of revolving armature and revolving field type AC generators;</p> <p>Single phase, two phase and three phase alternators;</p> <p>Three phase star and delta connections advantages and uses;</p> <p>Permanent Magnet Generators.</p>	-	2	2
<p><b>3.18 AC Motors</b></p> <p>Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase;</p> <p>Methods of speed control and direction of rotation;</p> <p>Methods of producing a rotating field: capacitor, inductor, shaded or split pole.</p>	-	2	2

Draft CAR 66

	Level		
	A	B1	B2
<p>Basic appreciation of other transistor types and their uses.</p> <p>Application of transistors: classes of amplifier (A, B, C);</p> <p>Simple circuits including: bias, decoupling, feedback and stabilisation;</p> <p>Multistage circuit principles: cascades, push-pull, oscillators, multivibrators, flip-flop circuits.</p>			
<p><b>4.1.3 Integrated Circuits</b></p>			
<p>(a)</p> <p>Description and operation of logic circuits and linear circuits/operational amplifiers.</p>	-	1	-
<p>(b)</p> <p>Description and operation of logic circuits and linear circuits;</p> <p>Introduction to operation and function of an operational amplifier used as: integrator, differentiator, voltage follower, comparator;</p> <p>Operation and amplifier stages connecting methods: resistive capacitive, inductive (transformer), inductive resistive (IR) , direct;</p> <p>Advantages and disadvantages of positive and negative feedback.</p>	-	-	2
<p><b>4.2 Printed Circuit Boards</b></p> <p>Description and use of printed circuit boards.</p>	-	1	2
<p><b>4.3 Servomechanics</b></p>			
<p>(a)</p> <p>Understanding of the following terms: Open and closed loop systems, feedback, follow up, analogue transducers;</p> <p>Principles of operation and use of the following synchro system components/features: resolvers, differential, control and torque, transformers, inductance and capacitance transmitters.</p>	-	1	-
<p>(b)</p> <p>Understanding of the following terms: Open and closed loop, follow up, servomechanism, analogue, transducer, null, damping, feedback, deadband;</p> <p>Construction operation and use of the following synchro system components: resolvers, differential, control and torque, E and I transformers, inductance transmitters, capacitance transmitters, synchronous transmitters;</p> <p>Servomechanism defects, reversal of synchro leads, hunting.</p>	-	-	2

MODULE 5. DIGITAL TECHNIQUES ELECTRONIC INSTRUMENT SYSTEMS

	Level			
	A	B1.1 B1.3	B1.2 B1.4	B2
<p><b>5.1 Electronic Instrument Systems</b></p> <p>Typical systems arrangements and cockpit layout of electronic instrument systems.</p>	1	2	2	3
<p><b>5.2 Numbering Systems</b></p> <p>Numbering systems: binary, octal and hexadecimal;</p> <p>Demonstration of conversions between the decimal and binary, octal and hexadecimal systems and vice versa.</p>	-	1	-	2
<p><b>5.3 Data Conversion</b></p> <p>Analogue Data, Digital Data;</p> <p>Operation and application of analogue to digital, and digital to analogue converters, inputs and outputs, limitations of various types.</p>	-	1	-	2
<p><b>5.4 Data Buses</b></p> <p>Operation of data buses in aircraft systems, including known ARINC and other specifications</p>	-	2	-	2
<p><b>5.5 Logic Circuits</b></p> <p>(a)</p> <p>Identification of common logic gate symbols, tables and equivalent circuits;</p> <p>Applications used for aircraft systems, schematic diagrams.</p>	-	2	-	2
<p>(b)</p> <p>Interpretation of logic diagrams.</p>	-	-	-	2
<p><b>5.6 Basic Computer Structure</b></p> <p>(a)</p> <p>Computer terminology (including bit, byte, software, hardware, CPU, IC, and various memory devices such as RAM, ROM, PROM);</p> <p>Computer technology (as applied in aircraft systems).</p>	1	2	-	-
<p>(b)Computer related terminology;</p> <p>Operation, layout and interface of the major components in a micro computer including their associated bus systems;</p> <p>Information contained in single and multiaddress instruction words;</p> <p>Memory associated terms;</p>	-	-	-	2

Draft CAR 66

	Level			
	A	B1.1 B1.3	B1.2 B1.4	B2
	<p>Operation of typical memory devices;</p> <p>Operation, advantages and disadvantages of the various data storage systems.</p>			
<p><b>5.7 Microprocessors</b></p> <p>Functions performed and overall operation of a microprocessor;</p> <p>Basic operation of each of the following microprocessor elements: and processing unit, clock, register, arithmetic logic unit.</p>	-	-	-	2
<p><b>5.8 Integrated Circuits</b></p> <p>Operation and use of encoders and decoders;</p> <p>Function of encoder types;</p> <p>Uses of medium, large and very large scale integration</p>	-	-	-	2
<p><b>5.9 Multiplexing</b></p> <p>Operation, application and identification in logic diagrams of multiplexers and demultiplexers</p>	-	-	-	2
<p><b>5.10 Fibre Optics</b></p> <p>Advantages and disadvantages of fibre optic data transmission electrical wire propagation;</p> <p>Fibre optic data bus;</p> <p>Fibre optic related terms;</p> <p>Terminations;</p> <p>Couplers, control terminals, remote terminals;</p> <p>Application of fibre optics in aircraft systems.</p>	-	1	1	2
<p><b>5.11 Electronic Displays</b></p> <p>Principles of operation of common types of displays used in modern aircraft, including</p> <p>Cathode Ray Tubes, Light Emitting Diodes and Liquid Crystal Display.</p>	-	2	-	2
<p><b>5.12 Electronic Sensitive Devices</b></p> <p>Special handling of components sensitive to electrostatic discharges;</p> <p>Awareness of risks and possible damage, component and personnel anti-static protection devices.</p>	1	2	2	2

<b>5.13 Software Management Control</b>				
Awareness of restrictions, airworthiness requirements and possible catastrophic effects of unapproved changes to software programmes	-	2	1	2

	Level			
	A	B1.1 B1.3	B1.2 B1.4	B2
<b>5.14 Electromagnetic Environment</b>	-	2	2	2
Influence of the following phenomena on maintenance practices for electronic system:				
EMC-Electromagnetic Compatibility.				
EMI-Electromagnetic Interference				
HIRF-High Intensity Radiated Field				
Lightning/lightning protection				
<b>5.15 Typical Electronic / Digital Aircraft Systems</b>	-	2	2	2
General arrangement of typical electronic/digital aircraft systems and associated BITE				
(Built In Test Equipment) testing such as:				
ACARS-ARINC Communication and Addressing and Reporting System				
ECAM-Electronic Centralised Aircraft Monitoring				
EFIS-Electronic Flight Instrument System				
EICAS-Engine Indication and Crew Alerting System				
FBW-Fly by Wire				
FMS-Flight Management System				
GPS-Global Positioning System

MODULE 6. MATERIALS AND HARDWARE

	Level		
	A	B1	B2
<b>6.1 Aircraft Materials - Ferrous</b>			
(a) Characteristics, properties and identification of common alloy steels used in aircraft; Heat treatment and application of alloy steels;	1	2	1
(b) Testing of ferrous materials for hardness, tensile strength, fatigue strength and impact resistance.	-	1	1
<b>6.2 Aircraft Materials – Non-Ferrous</b>			
(a) Characteristics, properties and identification of common non-ferrous materials used in aircraft; Heat treatment and application of non-ferrous materials;	1	2	1
(b) Testing of non-ferrous material for hardness, tensile strength, fatigue strength and impact resistance.	-	1	1
<b>6.3 Aircraft Materials – Composite and Non-Metallic</b>			
<b>6.3.1 Composite and non-metallic other than wood and fabric</b>			
(a) Characteristics, properties and identification of common composite and non-metallic materials, other than wood, used in aircraft; Sealant and bonding agents.	1	2	2
(b) The detection of defects/deterioration in composite and non-metallic material. Repair of composite and non-metallic material.	1	2	-
<b>6.3.2 Wooden structures</b>			
Construction methods of wooden airframe structures; Characteristics, properties and types of wood and glue used in aeroplanes; Preservation and maintenance of wooden structure; Types of defects in wood material and wooden structures; The detection of defects in wooden structure; Repair of wooden structure.	1	2	-

Draft CAR 66

	Level		
	A	B1	B2
<p>6.3.3 <i>Fabric covering</i>                      Characteristics, properties and types of fabrics used in aeroplanes;                      Inspections methods for fabric;                      Types of defects in fabric;                      Repair of fabric covering.</p>	1	2	-
<p>6.4 <b>Corrosion</b>                      (a)                      Chemical fundamentals;                      Formation by, galvanic action process, microbiological, stress;</p>	1	2	1
<p>(b)                      Types of corrosion and their identification;                      Causes of corrosion;                      Material types, susceptibility to corrosion.</p>	2	3	2
<p>6.5 <b>Fasteners</b>                      6.5.1 Screw threads                      Screw nomenclature;                      Thread forms, dimensions and tolerances for standard threads used in aircraft;                      Measuring screw threads;</p>	2	2	2
<p>6.5.2 Bolts, studs and screws                      Bolt types: specification, identification and marking of aircraft bolts, international standards;                      Nuts: self locking, anchor, standard types;                      Machine screws: aircraft specifications;                      Studs: types and uses, insertion and removal;                      Self tapping screws, dowels.</p>	2	2	2
<p>6.5.3 Locking devices                      Tab and spring washers, locking plates, split pins, pal-nuts, wire locking, quick release fasteners, keys, circlips, cotter pins.</p>	2	2	2

	Level		
	A	B1	B2
<p>6.5.4 <i>Aircraft rivets</i> Types of solid and blind rivets: specifications and identification, heat treatment.</p>	1	2	1
<p><b>6.6 Pipes and Unions</b> (a) Identification of, and types of rigid and flexible pipes and their connectors used in aircraft</p>	2	2	2
<p>(b) Standard unions for aircraft hydraulic, fuel, oil, pneumatic and air system pipes.</p>	2	2	2
<p><b>6.7 Springs</b> Types of springs, materials, characteristics and applications</p>	-	2	1
<p><b>6.8 Bearings</b> Purpose of bearings, loads, material, construction; Types of bearings and their application.</p>	1	2	2
<p><b>6.9 Transmissions</b> Gear types and their application; Gear ratios, reduction and multiplication gear systems, driven and driving gears, idler gears, mesh patterns; Belts and pulleys, chains and sprockets.</p>	1	2	2
<p><b>6.10 Control Cables</b> Types of cables; End fittings, turnbuckles and compensation devices; Pulleys and cable system components; Bowden cables; Aircraft flexible control systems.</p>	1	2	1
<p><b>6.11 Electrical cables and Connectors</b> Cable types, construction and characteristics; High tension and co-axial cables; Crimping; Connector types, pins, plugs, sockets, insulators, current and voltage rating, coupling, identification codes.</p>	1	2	2

Draft CAR 66

MODULE 7. MAINTENANCE PRACTICES

	Level		
	A	B1	B2
<p><b>7.1 Safety Precautions-Aircraft and Workshop</b>                      Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals.                      Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents.</p>	3	3	3
<p><b>7.2 Workshop Practices</b>                      Care of tools, control of tools, use of workshop materials;                      Dimensions, allowances and tolerances, standards of workmanship;                      Calibration of tools and equipment, calibration standards.</p>	3	3	3
<p><b>7.3 Tools</b>                      Common hand tool types;                      Common power tool types;                      Operation and use of precision measuring tools;                      Lubrication equipment and methods.                      Operation, function and use of electrical general test equipment;</p>	3	3	3
<p><b>7.4 Avionic General Test Equipment</b>                      Operation, function and use of avionic general test equipment.</p>	-	2	3
<p><b>7.5 Engineering Drawings, Diagrams and Standards</b>                      Drawing types and diagrams, their symbols, dimensions, tolerances and projections;                      Identifying title block information;                      Microfilm, microfiche and computerised presentations;                      Specification 100 of the Air Transport Association (ATA) of America;                      Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL;                      Wiring diagrams and schematic diagrams.</p>	1	2	2

	Level		
	A	B1	B2
<p><b>7.6 Fits and Clearances</b></p> <p>Drill sizes for bolt holes, classes of fits; Common system of fits and clearances; Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear; Standard methods for checking shafts, bearings and other parts.</p>	1	2	1
<p><b>7.7 Electrical Cables and Connectors</b></p> <p>Continuity, insulation and bonding techniques and testing; Use of crimp tools: hand and hydraulic operated; Testing of crimp joints; Connector pin removal and insertion; Co-axial cables: testing and installation precautions; Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding.</p>	1	2	2
<p><b>7.8 Riveting</b></p> <p>Riveted joints, rivet spacing and pitch; Tools used for riveting and dimpling; Inspection of riveted joints.</p>	1	2	-
<p><b>7.9 Pipes and Hoses</b></p> <p>Bending and belling/flaring aircraft pipes; Inspection and testing of aircraft pipes and hoses; Installation and clamping of pipes.</p>	1	2	-
<p><b>7.10 Springs</b></p> <p>Inspection and testing of springs</p>	1	2	-
<p><b>7.11 Bearings</b></p> <p>Testing, cleaning and inspection of bearings; Lubrication requirements of bearings; Defects in bearings and their causes.</p>	1	2	-

Draft CAR 66

	Level		
	A	B1	B2
<p><b>7.12 Transmissions</b>                      Inspection of gears, backlash;                      Inspection of belts and pulleys, chains and sprockets;                      Inspection of screw jacks, lever devices, push-pull rod systems.</p>	1	2	-
<p><b>7.13 Control Cables</b>                      Swaging of end fittings;                      Inspection and testing of control cables;                      Bowden cables; aircraft flexible control systems.</p>	1	2	-
<p><b>7.14 Material handling</b></p>			
<p>7.14.1 Sheet Metal                      Marking out and calculation of bend allowance;                      Sheet metal working, including bending and forming;                      Inspection of sheet metal work.</p>	-	2	-
<p>7.14.2 Composite and non-metallic                      Bonding practices;                      Environmental conditions                      Inspection methods</p>	-	2	-
<p><b>7.15 Welding, Brazing, Soldering and Bonding</b></p>			
<p>(a)                      Soldering methods; inspection of soldered joints</p>	-	2	2
<p>(b)                      Welding and brazing methods;                      Inspection of welded and brazed joints;                      Bonding methods and inspection of bonded joints.</p>	-	2	-
<p><b>7.16 Aircraft Weight and Balance</b></p>			
<p>(a)                      Centre of Gravity/Balance limits calculation: use of relevant documents;</p>	-	2	2
<p>(b)                      Preparation of aircraft for weighing;                      Aircraft weighing;</p>	-	2	-

	Level		
	A	B1	B2
<b>7.17 Aircraft Handling and Storage</b>	2	2	2
Aircraft taxiing/towing and associated safety precautions;			
Aircraft jacking, chocking, securing and associated safety precautions;			
Aircraft storage methods;			
Refuelling/defuelling procedures;			
De-icing/anti-icing procedures;			
Electrical, hydraulic and pneumatic ground supplies.			
Effects of environmental conditions on aircraft handling and operation.			
<b>7.18 Disassembly, Inspection, Repair and Assembly Techniques</b>			
(a)	2	3	2
Types of defects and visual inspection techniques			
Corrosion removal, assessment and re-protection.			
(b)	-	2	-
General repair methods, Structural Repair Manual;			
Ageing, fatigue and corrosion control programmes;			
(c)	-	2	1
Non destructive inspection techniques including, penetrant, radiographic, eddy current, ultrasonic and boroscope methods.			
(d)	2	2	2
Disassembly and re-assembly techniques			
(e)	-	2	2
Trouble shooting techniques			
<b>7.19 Abnormal Events</b>			
(a)	2	2	2
Inspections following lightning strikes and HIRF penetration.			
(b)	2	2	-
Inspections following abnormal events such as heavy landings and flight through turbulence.			

Draft CAR 66

	Level		
	A	B1	B2
<b>7.20 Maintenance Procedures</b> Maintenance planning; Modification procedures; Stores procedures; Certification/release procedures; Interface with aircraft operation; Maintenance Inspection/Quality Control/Quality Assurance; Additional maintenance procedures. Control of life limited components	1	2	2

MODULE 8. BASIC AERODYNAMICS

	Level		
	A	B1	B2
<b>8.1 Physics of the Atmosphere</b> International Standard Atmosphere (ISA) , application to aerodynamics.	1	2	2
<b>8.2 Aerodynamics</b> Airflow around a body; Boundary layer, laminar and turbulent flow, free stream flow, relative airflow, upwash and down wash, vortices, stagnation; The terms: camber, chord, mean aerodynamic chord, profile (parasite) drag, induced drag, centre of pressure, angle of attack, wash in and wash out fineness ratio, wing shape and aspect ratio; Thrust, Weight, Aerodynamic Resultant; Generation of Lift and Drag: Angle of Attack, Lift coefficient, Drag coefficient, polar curve, stall; Aerofoil contamination including ice, snow, frost	1	2	2

	Level		
	A	B1	B2
<b>8.3 Theory of Flight</b> Relationship between lift, weight, thrust and drag; Glide ratio; Steady state flights, performance; Theory of the turn; Influence of load factor: stall, flight envelope and structural limitations; Lift augmentation.	1	2	2
<b>8.4 Flight Stability and Dynamics</b> Longitudinal, lateral and directional stability (active and passive).	1	2	2

MODULE 9. HUMAN FACTORS

	Level		
	A	B1	B2
<b>9.1 General</b> The need to take human factors into account; Incidents attributable to human factors/human error; 'Murphy's' law.	1	2	2
<b>9.2 Human Performance and Limitations</b> Vision; Hearing; Information processing; Attention and perception; Memory; Claustrophobia and physical access.	1	2	2
<b>9.3 Social Psychology</b> Responsibility: individual and group; Motivation and de-motivation; Peer pressure; 'Culture' issues;	1	1	1

Draft CAR 66

Team working;			
Management, supervision and leadership.			

	Level		
	A	B1	B2
<b>9.4 Factors Affecting Performance</b> Fitness/health; Stress: domestic and work related; Time pressure and deadlines; Workload: overload and underload; Sleep and fatigue, shiftwork; Alcohol, medication, drug abuse.	2	2	2
<b>9.5 Physical Environment</b> Noise and fumes; Illumination; Climate and temperature; Motion and vibration; Working environment	1	1	1
<b>9.6 Tasks</b> Physical work; Repetitive tasks; Visual inspection; Complex systems.	1	1	1
<b>9.7 Communication</b> Within and between teams; Work logging and recording; Keeping up to date, currency; Dissemination of information.	2	2	2
<b>9.8 Human Error</b> Error models and theories; Types of error in maintenance tasks; Implications of errors (i.e accidents) Avoiding and managing errors.	1	2	2

<b>9.9 Hazards in the Workplace</b> Recognising and avoiding hazards; Dealing with emergencies.	1	2	2
---	---	---	---

# Draft CAR 66

## MODULE 10. AVIATION LEGISLATION

	Level		
	A	B1	B2
<b>10.1 Regulatory Framework</b> Role of International Civil Aviation Organisation; Role of DGCA; Role of the DGCA; Relationship between Part-145, Part-66, Part-147 and PartM Relationship with other Aviation Authorities.	1	1	1
<b>10.2 Part-66 - Certifying Staff - Maintenance</b> Detailed understanding of Part -66	2	2	2
<b>10.3 Part-145 - Approved Maintenance Organisations</b> Detailed understanding of Part -145.	2	2	2
<b>10.4 DGCA-OPS - Commercial Air Transportation</b> Air Operators Certificates; Operators Responsibilities; Documents to be Carried; Aircraft Placarding (Markings);	1	1	1
<b>10.5 Aircraft Certification</b> (a) General Certification rules: such as EACS 23/25/27/29; Type Certification; Supplemental Type Certification; Part-21 Design/Production Organisation Approvals.	-	1	1
(b) Documents Certificate of Airworthiness; Certificate of Registration; Noise Certificate; Weight Schedule; Radio Station Licence and Approval.	-	2	2
<b>10.6 Part-M</b> Detailed understanding of Part-M.	2	2	2

	Level		
	A	B1	B2
<b>10.7 Applicable National and International Requirements for</b> (if not superseded by DGCA requirements)			
(a) Maintenance Programmes, Maintenance checks and inspections; Master Minimum Equipment Lists, Minimum Equipment List, Dispatch Deviation Lists; Airworthiness Directives; Service Bulletins, manufacturers service information; Modifications and repairs; Maintenance documentation: maintenance manuals, structural repair manual, illustrated parts catalogue, etc.;	1	2	2
(b) Continuing airworthiness; Test flights; ETOPS, maintenance and dispatch requirements; All Weather Operations, Category 2/3 operations and minimum equipment requirements.	-	1	1

MODULE 11A. TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level		
	A	B1.1	B2
<b>11.1 Theory of Flight</b> 11.1.1 Aeroplane Aerodynamics and Flight Controls Operation and effect of; <ul style="list-style-type: none"> <li>• roll control: ailerons and spoilers;</li> <li>• pitch control: elevators, stabilators, variable incidence stabilisers and canards;</li> <li>• yaw control, rudder limiters;</li> </ul> Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons;	1	2	-

Draft CAR 66

	Level		
	A	B1.1	B2
<p>Drag inducing devices, spoilers, lift dumpers, speed brakes;</p> <p>Effects of wing fences, saw tooth leading edges;</p> <p>Boundary layer control using, vortex generators, stall wedges or leading edge devices;</p> <p>Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels;</p> <p>11.1.2 High Speed Flight</p> <p>Speed of sound, subsonic flight, transonic flight, supersonic flight,</p> <p>Mach number, critical Mach number, compressibility buffet, shock wave, aerodynamic heating, area rule;</p> <p>Factors affecting airflow in engine intakes of high speed aircraft;</p> <p>Effects of sweepback on critical Mach number</p>	1	2	-
<p><b>11.2 Airframe Structures - General Concepts</b></p> <p>(a)</p> <p>Airworthiness requirements for structural strength;</p> <p>Structural classification, primary, secondary and tertiary;</p> <p>Fail safe, safe life, damage tolerance concepts;</p> <p>Zonal and station identification systems;</p> <p>Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue;</p> <p>Drains and ventilation provisions;</p> <p>System installation provisions;</p> <p>Lightning strike protection provision</p> <p>Aircraft bonding</p>	2	2	-
<p>(b)</p> <p>Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments;</p>	1	2	-

	Level		
	A	B1.1	B2
Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning. Airframe symmetry: methods of alignment and symmetry checks.			
<b>11.3 Airframe Structures - Aeroplanes</b>			
11.3.1 Fuselage (ATA 52/53/56) Construction and pressurisation sealing; Wing, stabiliser, pylon and undercarriage attachments; Seat installation and cargo loading system; Doors and emergency exits: construction, mechanisms, operation and safety devices; Windows and windscreen construction and mechanisms.	1	2	-
11.3.2 Wings (ATA 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments.	1	2	-
11.3.3 Stabilizers (ATA 55) Construction; Control surface attachment.	1	2	-
11.3.4 Flight Control Surfaces (ATA 55/57) Construction and attachment; Balancing - mass and aerodynamic.	1	2	-

	A	B1	B2
<p><b>15.10 Lubrication Systems</b> System operation/lay-out and components</p>	1	2	-
<p><b>15.11 Fuel Systems</b> Operation of engine control and fuel metering systems including electronic engine control (FADEC); Systems lay-out and components.</p>	1	2	-
<p><b>15.12 Air Systems</b> Operation of engine air distribution and anti-ice control systems, including internal cooling, sealing and external air services.</p>	1	2	-
<p><b>15.13 Starting and Ignition Systems</b> Operation of engine start systems and components; Ignition systems and components; Maintenance safety requirements.</p>	1	2	-
<p><b>15.14 Engine Indication Systems</b> Exhaust Gas Temperature/Interstage Turbine Temperature; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; oil pressure and temperature; Fuel pressure and flow; Engine speed; Vibration measurement and indication; Torque; Power.</p>	1	2	-
<p><b>15.15 Power Augmentation Systems</b> Operation and applications; Water injection, water methanol; Afterburner systems</p>	-	1	-
<p><b>15.16 Turbo-prop Engines</b> Gas coupled/free turbine and gear coupled turbines; Reduction gears; Integrated engine and propeller controls; Overspeed safety devices.</p>	1	2	-

	Level		
	A	B1	B2
<b>15.17 Turbo-shaft engines</b> Arrangements, drive systems, reduction gearing, couplings, control systems.	1	2	-
<b>15.18 Auxiliary Power Units (APUs)</b> Purpose, operation, protective systems	1	2	-
<b>15.19 Powerplant Installation</b> Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2	-
<b>15.20 Fire Protection Systems</b> Operation of detection and extinguishing systems	1	2	-
<b>15.21 Engine Monitoring and Ground Operation</b> Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Trend (including oil analysis, vibration and boroscope) monitoring; Inspection of engine and components to criteria, tolerances and data specified manufacturer; Compressor washing/cleaning; Foreign Object Damage	1	3	-
<b>15.22 Engine Storage and Preservation</b> Preservation and depreservation for the engine and accessories/systems.	-	2	-

MODULE 16. PISTON ENGINE

	Level		
	A	B1	B2
<b>16.1 Fundamentals</b> Mechanical, thermal and volumetric efficiencies; Operating principles - 2 stroke, 4 stroke, Otto and Diesel; Piston displacement and compression ratio; Engine configuration and firing order.	1	2	-

Draft CAR 66

<p><b>16.2 Engine Performance</b>                  Power calculation and measurement;                  Factors affecting engine power;                  Mixtures/leaning, pre-ignition</p>	1	2	-
--	---	---	---

	Level		
	A	B1	B2
<p><b>16.3 Engine Construction</b>                  Crank case, crank shaft, cam shafts, sumps;                  Accessory gearbox;                  Cylinder and piston assemblies;                  Connecting rods, inlet and exhaust manifolds;                  Valve mechanisms;                  Propeller reduction gearboxes</p>	1	2	-
<p><b>16.4 Engine Fuel Systems</b></p>			
<p>16.4.1 Carburettors                  Types, construction and principles of operation;                  Icing and heating.</p>	1	2	-
<p>16.4.2 Fuel injection systems                  Types, construction and principles of operation.</p>	1	2	-
<p>16.4.3 Electronic engine control                  Operation of engine control and fuel metering systems including electronic engine control (FADEC);                  Systems lay-out and components.</p>	1	2	-
<p><b>16.5 Starting and Ignition Systems</b>                  Starting systems, pre-heat systems;                  Magneto types, construction and principles of operation;                  Ignition harnesses, spark plugs;                  Low and high tension systems.</p>	1	2	-
<p><b>16.6 Induction, Exhaust and Cooling Systems</b>                  Construction and operation of: induction systems including alternate air systems;                  Exhaust systems, engine cooling systems - air and liquid.</p>	1	2	-
<p><b>16.7 Supercharging / Turbo charging</b>                  Principles and purpose of supercharging and its effects on engine parameters;</p>	1	2	-

Construction and operation of supercharging/turbocharging systems; System terminology; Control systems; System protection.			
---	--	--	--

	Level		
	A	B1	B2
<b>16.8 Lubricants and Fuels</b> Properties and specifications; Fuel additives; Safety precautions.	1	2	-
<b>16.9 Lubrication Systems</b> System operation/lay-out and components	1	2	-
<b>16.10 Engine Indication Systems</b> Engine speed; Cylinder head temperature; Coolant temperature; oil pressure and temperature; Exhaust Gas Temperature; Fuel pressure and flow; Manifold pressure.	1	2	-
<b>16.11 Powerplant Installation</b> Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2	-
<b>16.12 Engine Monitoring and Ground Operation</b> Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Inspection of engine and components: criteria, tolerances, and data specified by engine manufacturer.	1	3	-
<b>16.13 Engine Storage and Preservation</b> Preservation and depreservation for the engine and accessories/systems.	-	2	-

MODULE 17. PROPELLER

	Level		
	A	B1	B2

Draft CAR 66

<p><b>17.1 Fundamentals</b>                  Blade element theory;                  High/low blade angle, reverse angle, angle of attack, rotational speed;                  Propeller slip;                  Aerodynamic, centrifugal, and thrust forces;                  Torque;                  Relative airflow on blade angle of attack;                  Vibration and resonance.</p>	1	2	-
---	---	---	---

	Level		
	A	B1	B2
<p><b>17.2 Propeller Construction</b>                  Construction methods and materials used in wooden, composite and metal propellers;                  Blade station, blade face, blade shank, blade back and hub assembly;                  Fixed pitch, controllable pitch, constant speed propeller;                  Propeller/spinner installation.</p>	1	2	-
<p><b>17.3 Propeller Pitch Control</b>                  Speed control and pitch change methods, mechanical and electrical/ electronic;                  Feathering and reverse pitch;                  Overspeed protection.</p>	1	2	-
<p><b>17.4 Propeller Synchronising</b>                  Synchronising and synchrophasing equipment.</p>	-	2	-
<p><b>17.5 Propeller Ice Protection</b>                  Fluid and electrical de-icing equipment.</p>	1	2	-
<p><b>17.6 Propeller Maintenance</b>                  Static and dynamic balancing;                  Blade tracking;                  Assessment of blade damage, erosion, corrosion, impact damage, delamination;                  Propeller treatment/repair schemes;                  Propeller engine running.</p>	1	3	-
<p><b>17.7 Propeller Storage and Preservation</b>                  Propeller preservation and depreservation</p>	1	2	-

**Basic Examination Standard**

*1. Standardisation Basis For Examinations*

- 1.1. All basic examinations must be carried out using the multi-choice question format and essay questions as specified below.
- 1.2. Each multi-choice question must have three alternative answers of which only one must be the correct answer and the candidate must be allowed a time per module which is based upon a nominal average of 75 seconds per question.
- 1.3. Each essay question requires the preparation of a written answer and the candidate must be allowed 20 minutes to answer each such question.
- 1.4. Suitable essay questions must be drafted and evaluated using the knowledge syllabus in CAR 66 Appendix I Modules 7, 9 and 10.
- 1.5. Each question will have a model answer drafted for it, which will also include any known alternative answers that may be relevant for other subdivisions.
- 1.6. The model answer will also be broken down into a list of the important points known as Key Points.
- 1.7. The pass mark for CAR 66 module and sub-module multi-choice part of the examination is 75 %.
- 1.8. The pass mark for each essay question is 75 % in that the candidates answer must contain 75 % of the required key points addressed by the question and no significant error related to any required key point.
- 1.9. If either the multi-choice part only or the essay part only is failed, then it is only necessary to retake the multichoice or essay part, as appropriate.
- 1.10. Penalty marking systems must not be used to determine whether a candidate has passed.
- 1.11. All CAR 66 modules that make up a complete Rule 61 aircraft maintenance licence category or subcategory must be passed within a 5 year time period of passing the first module except in the case specified in paragraph 1.12. A failed module may not be retaken for at least 90 days following the date of the failed module examination, except in the case of a CAR-147 approved maintenance training organisation which conducts a course of retraining tailored to the failed subjects in the particular module when the failed module may be retaken after 30 days.
- 1.12. The 5 year time period specified in paragraph 1.11 does not apply to those modules which are common to more than one CAR-66 aircraft maintenance licence category or subcategory and which were previously passed as part of another such category or subcategory examination.

*2. Question Numbers for the CAR -66 Appendix I Modules*

*2.1. Subject Module 1 Mathematics:*

~~Category A 16 multi choice and 0 essay questions. Time allowed 20 minutes.~~

~~Category B1 30 multi choice and 0 essay questions. Time allowed 40 minutes.~~

~~Category B2 30 multi choice and 0 essay questions. Time allowed 40 minutes.~~

*2.2. Subject Module 2 Physics:*

~~Category A 30 multi choice and 0 essay questions. Time allowed 40 minutes.~~

~~Category B1 50 multi choice and 0 essay questions. Time allowed 65 minutes.~~

~~Category B2 50 multi choice and 0 essay questions. Time allowed 65 minutes.~~

*2.3. Subject Module 3 Electrical Fundamentals:*

## Draft CAR 66

Category A- 0 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1-50 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2-50 multi-choice and 0 essay questions. Time allowed 65 minutes.

### 2.4. Subject Module 4 Electronic Fundamentals:

Category A-None.

Category B1-20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2-40 multi-choice and 0 essay questions. Time allowed 50 minutes.

### 2.5. Subject Module 5 Digital Techniques/Electronic Instrument Systems:

Category A-16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1.1 & B1.3-40 multi-choice and 0 essay questions. Time allowed 50 minutes.

Category B1.2 & B1.4-20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2-70 multi-choice and 0 essay questions. Time allowed 90 minutes.

### 2.6. Subject Module 6 Materials and Hardware:

Category A-50 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B1-70 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B2-60 multi-choice and 0 essay questions. Time allowed 75 minutes.

### 2.7. Subject Module 7 Maintenance Practices:

Category A-70 multi-choice and 2 essay questions. Time allowed 90 minutes plus 40 minutes.

Category B1-80 multi-choice and 2 essay questions. Time allowed 100 minutes plus 40 minutes.

Category B2-60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes.

### 2.8. Subject Module 8 Basic Aerodynamics:

Category A-20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1-20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2-20 multi-choice and 0 essay questions. Time allowed 25 minutes.

### 2.9. Subject Module 9 Human factors:

Category A-20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B1-20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B2-20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

### 2.10. Subject Module 10 Aviation Legislation:

Category A-30 multi-choice and 1 essay question. Time allowed 40 minutes plus 20 minutes.

- Category B1-40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.
- Category B2-40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.
- 2.11. Subject Module 11a Turbine Aeroplane Aerodynamics, Structures and Systems:
- Category A-100 multi-choice and 0 essay questions. Time allowed 125 minutes.
- Category B1-130 multi-choice and 0 essay questions. Time allowed 165 minutes.
- Category B2-None.
- 2.12. Subject Module 11b Piston Aeroplane Aerodynamics, Structures and Systems:
- Category A-70 multi-choice and 0 essay questions. Time allowed 90 minutes.
- Category B1-100 multi-choice and 0 essay questions. Time allowed 125 minutes.
- Category B2-None.
- 2.13. Subject Module 12 Helicopter Aerodynamics, Structures and Systems:
- Category A-90 multi-choice and 0 essay questions. Time allowed 115 minutes.
- Category B1-115 multi-choice and 0 essay questions. Time allowed 145 minutes.
- Category B2-None.
- 2.14. Subject Module 13 Aircraft Aerodynamics, Structures and Systems:
- Category A-None.
- Category B1-None.
- Category B2-130 multi-choice and 0 essay questions. Time allowed 165 minutes.
- 2.15. Subject Module 14 Propulsion:
- Category A-None.
- Category B1-None.
- Category B2-25 multi-choice and 0 essay questions. Time allowed 30 minutes.
- 2.16. Subject Module 15 Gas Turbine Engine:
- Category A-60 multi-choice and 0 essay questions. Time allowed 75 minutes.
- Category B1-90 multi-choice and 0 essay questions. Time allowed 115 minutes.
- Category B2-None.
- 2.17. Subject Module 16 Piston Engine:
- Category A-0 multi-choice and 0 essay questions. Time allowed 65 minutes.
- Category B1-0 multi-choice and 0 essay questions. Time allowed 90 minutes.
- Category B2-None.

## Draft CAR 66

### 2.18. Subject Module 17 Propeller:

Category A-0 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1-30 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B2-None.

DRAFT

### Appendix III

#### **Type training and Examination Standard**

##### 1. *Type training levels*

The three levels listed below define the objectives that a particular level of training is intended to achieve.

##### Level 1 General familiarization

A brief overview of the airframe, systems and powerplants as outlined in the Systems Description Section of the Aircraft Maintenance Manual.

1. Course objectives: Upon completion of the course, the student will be able to identify safety precautions related to the airframe, its systems and powerplant.
2. Identify maintenance practices important to the airframe, its systems and powerplant.
3. Define the general layout of the aircraft's major systems.
4. Define the general layout and characteristics of the powerplant.
5. Identify special tooling and test equipment used with the aircraft.

##### Level 2 Ramp and transit

Basic system overview of controls, indicators, principal components including their location and purpose, servicing and minor troubleshooting.

Course objectives: In addition to the information contained in the Level 1 General Familiarisation course, at the completion of this Level 2 Ramp and Transit training, the student will be able to:

1. Recall the safety precautions to be observed when working on or near the aircraft, powerplant and systems.
2. Demonstrate knowledge of the main ramp and transit (through-flight) activities of the following:
  - (a) Doors, windows and hatches.
  - (b) Electrical power supplies.
  - (c) Fuel.
  - (d) Auxiliary power unit.
  - (e) Powerplant.
  - (f) Fire protection.
  - (g) Environmental Control Systems.
  - (h) Hydraulic power.
  - (i) Landing gear.
  - (j) Flight controls.
  - (k) Water/waste.
  - (l) Oxygen.
  - (m) Flight and service interphone.
  - (n) Avionics.
  - (o) Cabin equipment/furnishings.
3. Describe systems and aircraft handling particularly access, power availability and sources.
4. Identify the locations of the principal components.
5. Explain the normal functioning of each major system, including terminology and nomenclature.

## Draft CAR 66

6. Perform the procedures for ramp and transit servicing associated with the aircraft for the following systems: Fuel, Power Plants, Hydraulics, Landing Gear, Water/Waste, Oxygen.
7. Demonstrate proficiency in use of crew reports and on-board reporting systems (minor troubleshooting) and determine aircraft airworthiness per the MEL/CDL.
8. Identify and use appropriate documentation.
9. Locate those procedures for replacement of components for ramp and transit activities identified in objective 2.

### Level 3 Line and base maintenance training

Detailed description, operation, component location, removal/installation and bite and troubleshooting procedures to maintenance manual level.

Course objectives: In addition to the information contained in Level 1 and Level 2 training, at the completion of Level III Line and Base Maintenance training, the student will be able to:

- (a) Perform system, engine, component and functional checks as specified in the maintenance manual.
- (b) Correlate information for the purpose of making decisions in respect of fault diagnosis and rectification to maintenance manual level.
- (c) Describe procedures for replacement of components unique to aircraft type.

### 2. Type training standard

Type training must include a theoretical and practical element.

#### 2.1. Theoretical element

As a minimum the elements in the Syllabus below that are specific to the aircraft type must be covered. Additional elements introduced due to technological changes shall also be included.

Training levels are those levels defined in paragraph 1 above.

After the first type course for category C certifying staff all subsequent courses need only be to level 1.

Introduction Module Title	Aeroplanes turbine		Aeroplanes piston		Helicopters turbine		Helicopters piston		Avionics
	B1	C	B1	C	B1	C	B1	C	B2
General Aircraft(dimensions/weights MTOW etc)									
Time limits/maintenance checks									
Levelling and weighing

## 2.2. Practical element

The practical training element must consist of the performance of representative maintenance tasks and their assessment, in order to meet the following objectives:

- (a) Ensure safe performance of maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, rigging and functional checks such as engine run, etc, if required.
- (b) Correctly use all technical literature and documentation for the aircraft.
- (c) Correctly use specialist/special tooling and test equipment, perform removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

## 3. Type training examination standard

Where aircraft type training is required, the examination must be written and comply with the following:

1. Format of the examination is of the multiple-choice type. Each multiple-choice question must have three alternative answers of which only one must be the correct answer. The time for answering is based upon a nominal average of 120 seconds per level 3 question and 75 seconds per level 1 or 2 question.
2. The examination must be of the closed book type. No reference material is permitted. An exception will be made for the case of examining a B1 or B2 candidate's ability to interpret technical documents.
3. The number of questions must be at least one question per hour of instruction subject to a minimum of two questions per Syllabus subject. The competent authority of the DGCA will assess number and level of questions on a sampling basis when approving the course.

## Draft CAR 66

4. The examination pass mark is 75 %.

5. Penalty marking is not to be used to determine whether a candidate has passed.

6. End of module phase examinations cannot be used as part of the final examination unless they contain the correct number and level of questions required.

### 4. *Type examination standard*

Where type training is not required, the examination must be oral, written or practical assessment based, or a combination thereof.

Oral examination questions must be open.

Written examination questions must be essay type or multiple-choice questions.

Practical assessment must determine a person's competence to perform a task.

Examination subjects must be on a sample of subjects drawn from paragraph 2 type training/examination syllabus, at the indicated level.

The examination must ensure that the following objectives are met:

(a) Properly discuss with confidence the aircraft and its systems.

(b) Ensure safe performance of maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, rigging and functional checks such as engine run, etc, if required.

(c) Correctly use all technical literature and documentation for the aircraft.

(d) Correctly use specialist/special tooling and test equipment, perform removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

A written report must be made by the examiner to explain why the candidate has passed or failed.

**Experience requirements for extending a Rule 61 Aircraft Maintenance Licence**

The table below shows the experience requirements for adding a new category or subcategory to an existing Part-66 licence.

The experience must be practical maintenance experience on operating aircraft in the subcategory relevant to the application.

The experience requirement will be reduced by 50 % if the applicant has completed an approved CAR t-147 course relevant to the subcategory.

## Draft CAR 66

### Rule 61 AIRCRAFT MAINTENANCE LICENCE

1. An example of the Rule 61 aircraft maintenance licence can be found on the following pages.
2. The document must be printed in the standardised form shown but may be reduced in size to accommodate its computer generation if desired. When the size is reduced care should be exercised to ensure sufficient space is available in those places where official seals/stamps are required. Computer generated documents need not have all the boxes incorporated when any such box remains blank so long as the document can clearly be recognised as the Rule 61 aircraft maintenance licence.
3. The document may be printed in the English
4. Each licence holder must have a unique licence number based upon a National identifier and an alpha-numeric designator.
5. The document may have the pages in any order and need not have some or any divider lines as long as the information contained is positioned such that each page layout can clearly be identified with the format of the example Rule 61 aircraft maintenance licence contained herein. The aircraft type rating page need not be issued until the first type endorsement is included.
6. The document may be prepared by the competent authority or by any CAR -145 approved maintenance organisation in accordance with a procedure approved by the DGCA and contained in the CAR - 145 maintenance organisation exposition except that in all cases the competent authority will issue the document.
7. The preparation of any variation to an existing Rule 61 aircraft maintenance licence may be carried out by the competent authority or by any CAR -145 approved maintenance organisation in accordance with a procedure approved by the competent authority and contained in the CAR -145 maintenance organisation exposition except that in all cases the competent authority will issue the document with the variation.
8. The Rule 61 aircraft maintenance licence once issued is required to be kept by the person to whom it applies in good condition and who shall remain accountable for ensuring that no unauthorised entries are made.
9. Failure to comply with paragraph 8 may invalidate the document and could lead to the holder not being permitted to hold any CAR -145 certification authorisation and may result in prosecution under National law.
10. The annex to CA Form 26 is optional and may only be used to include National Privileges not covered by Rule 61, where such privileges were covered by the national regulation in force prior to the implementation of Rule 61.
11. With regard to the aircraft type rating page the competent authority may choose not to issue this page until the first aircraft type rating needs to be endorsed and will need to issue more than one aircraft type rating page when there are a number to be listed.
12. Notwithstanding 11, each page issued will be in this format and contain the specified information for that page.
13. If there are no limitations applicable, the LIMITATIONS page will be issued stating 'No limitations'.
14. Where a pre-printed format is used, any category, subcategory.

RULE 61

AIRCRAFT MAINTENANCE LICENCE

CA FORM 26

Conditions:

1. This licence must be signed by the holder and be accompanied by an identity document containing a photograph of licence holder.
2. Endorsement of any (sub) categories on the page (s) entitled Rule 61 (SUB) CATEGORIES only, does not permit the holder to issue a certificate of release to service for an aircraft.
3. This licence when endorsed with an aircraft type rating meets the intent of ICAO annex 1.
4. The privileges of the holder of this licence are prescribed by Rule 61 and the applicable requirements of Part-145.
5. This licence remains valid until the date specified on the limitation page unless previous suspended or revoked.
6. The privileges of this licence may not be exercised unless in the preceding two year period the holder has had either six months of maintenance experience in accordance with the privileges granted by the licence, or met the provision for the issue of the appropriate privileges.

1. State of Issue
